SUMMARY

Network engineer with 4+ years across AWS, Linux and enterprise networking, now working primarily in DevOps and platform engineering. Build CI/CD in GitHub Actions and AWS CodePipeline, describe infrastructure in Terraform and Ansible, and run GitOps pipelines that turn manual build-out into a reviewed merge. Manage roughly 99 mixed Linux, macOS and Windows endpoints as version-controlled configuration, and operate a threat-detection and log pipeline on CrowdSec, Suricata, Loki and Grafana. Certified CCNA and RHCSA, plus Linux Foundation certificates in Kubernetes (LFS158) and DevOps & SRE (LFS162).

TECHNICAL SKILLS

Cloud: AWS (EC2, VPC, RDS, S3, IAM, Lightsail, Elastic Beanstalk, CloudWatch, SES, GuardDuty), Azure, DigitalOcean

CI/CD & GitOps: GitHub Actions, Gitea Actions, Jenkins, GitLab CI, AWS CodePipeline, Argo CD

Infrastructure as Code: Terraform, Ansible, YAML, Git

Containers & Orchestration: Docker, Kubernetes, Helm, LXD/LXC

Observability: Prometheus, Grafana, Grafana Alloy, Loki, CloudWatch

Security & Endpoint: CrowdSec, Suricata, ClamAV, Fleet/osquery, WireGuard, TLS/OpenSSL

Networking: Routing & switching, DNS, firewall policy, site-to-site VPN, load balancing, Wireshark

Systems & Scripting: Linux (Ubuntu, RHEL), Bash, Python, Nginx, Apache, Google Workspace administration

PROFESSIONAL EXPERIENCE

Rubico — Haridwar, Uttarakhand, India (On-site) | Sep 2022 – Present

Network Engineer — Dec 2024 – Present

- Build and maintain CI/CD pipelines in GitHub Actions and AWS CodePipeline, reducing a release to a reviewed merge; lint, build and deploy run as discrete jobs so a failure identifies the stage that broke.
- Built a GitOps workstation provisioning pipeline using Ansible playbooks orchestrated through Gitea Actions as a multi-job DAG with a composite action for shared setup, replacing a manual build-out checklist.
- Manage roughly 99 mixed Linux, macOS and Windows endpoints as version-controlled configuration, and built a systemd watchdog that distinguishes a deliberate service stop from a genuine failure before alerting.
- Designed and operate a threat-detection stack (CrowdSec, Suricata, ClamAV) shipping logs over WireGuard into Loki, with Grafana alert rules routing actionable signal to chat.
- Run building-wide network infrastructure: routing and switching, DNS, firewall policy, site-to-site VPN and TLS certificate lifecycle, plus Linux troubleshooting for internal teams.

Associate Network/Cloud Support Engineer — Sep 2022 – Dec 2024

- Provisioned and secured AWS infrastructure (EC2, VPC, RDS, S3) including subnets, route tables, security groups and IAM boundaries; automated application deployments with Elastic Beanstalk.
- Built WireGuard VPN infrastructure from scratch on EC2 and Lightsail: instance provisioning, routing and firewall configuration, peer management and client provisioning.
- Automated routine operational work in Bash, Python and YAML, and packaged applications with Docker for consistent environments across hosts.
- Monitored system performance with CloudWatch, applied security best practices and tuned environments for availability and scale.
- Installed and maintained Apache and Nginx web servers, DNS records and hosting configuration.

MISNT Service Private Limited — Dehradun, Uttarakhand, India | Jan 2022 – Aug 2022

Network and Desktop Support Engineer

- Configured and troubleshoot routing, switching and LAN connectivity for client sites to minimise downtime.
- Worked directly with clients to diagnose technical issues and scope service needs; provided on-site and remote support.
- Installed and maintained hardware and peripherals; performed OS and software installations and upgrades; maintained service reports and inventory.

EDUCATION

Bachelor of Computer Applications — Modern Institute of Technology, Rishikesh | Aug 2019 – 2021

CERTIFICATIONS

- **CCNA, RHCSA, MCSA** — MIS Dehradun
 - **The Linux Foundation**, Aug 2026 — Introduction to Kubernetes (LFS158); Introduction to DevOps and Site Reliability Engineering (LFS162)
 - **IBM**, Aug 2026 — Docker Essentials: A Developer Introduction; z/OS Network Security — Foundations
 - **AWS Training**, Jul 2026 — AWS Cloud Practitioner Essentials (course); Solutions Architect Fundamentals of Architecting; IAM Introduction
 - **learn.cantrill.io**, Jun 2025 — Docker Fundamentals
- Credly-verifiable badges and full certificate list: aaadarshkumar.github.io
